

CLAIMS

1. A docking system for a telephone comprising:  
a housing having a plurality of control elements and an interconnect port that electrically connects a circuit within the housing to a telephone attached to the housing; and  
a matrix display mounted to the housing and that receives display data from the circuit.

- 10 2. The system of Claim 1 wherein the housing comprises a first display port and a second display port.

3. The system of Claim 2 wherein the matrix display can be mounted to the housing at the first port or the second port.

- 15 4. The system of Claim 1 wherein the matrix display further comprises an array of transistor circuits formed with single crystal silicon, the array of transistor circuits being bonded to an optically transmissive substrate with an adhesive layer.

- 20 5. The system of Claim 1 further comprising a color sequential display circuit.

6. The system of Claim 1 wherein the matrix display is a color sequential display system including an active matrix liquid crystal display and an LED backlight.
